Noor & Yahya Khan

Breads & Bakes

Where precision pays off. Yahya runs this section, with scales, timers and a thermometer that he actually uses.

Munshi Naan

BREADS

Makes 4 naan · Mix 15 min · Rise 60–90 min · Cook 2–3 min each

A soft, pillowy yeasted naan enriched with yogurt and ghee. Weighed, not guessed — measured to the gram so it comes out the same every time. The yogurt keeps the crumb tender; the ghee gives it that glossy, restaurant-style finish.

your hero photo goes here

INGREDIENTS · SCALED FOR 4

All-Purpose Flour	240 g
Active Dry Yeast (Khamir)	3 g
Sugar	4 g
Warm Milk (or water)	120 g
Salt	4.5 g
Plain Yogurt	30 g
Ghee (or melted butter)	14 g

Milk warm, **not hot** — ~105°F (40°C). Hotter than 115°F (46°C) kills the yeast.

METHOD

- 1. Bloom the yeast.** Stir the yeast and sugar into the warm milk (120 g, ~105°F / 40°C). Let it stand 5–10 min until foamy. No foam means dead yeast — start over.
- 2. Mix the dough.** In a bowl combine the flour (240 g) and salt (4.5 g). Add the yogurt (30 g), ghee (14 g) and the yeast milk. Mix to a shaggy dough.
- 3. Knead.** Knead 8–10 min by hand (or 5 min in a stand mixer on medium) until smooth, soft and slightly tacky — no less. It should spring back when pressed.
- 4. First rise.** Cover and rest in a warm spot 60–90 min, until doubled in size.
- 5. Divide & shape.** Knock back, divide into 4 equal pieces (~102 g each). Ball them, cover, and rest 10 min so the gluten relaxes.
- 6. Roll.** Roll or stretch each into a teardrop ~8 in long and ~1/4 in thick.

- 7. Cook hot.** Cook on a screaming-hot cast-iron skillet or tava, 2–3 min total — flip once big bubbles form and the underside is charred in spots.
- 8. Finish.** Brush with extra ghee straight off the heat. Keep wrapped in a towel until serving so they stay soft.

Yahya's note: *weigh everything. The yogurt is not optional — it is what makes the crumb tender instead of bready. If the dough fights the roll, let it rest another 5 min; relaxed gluten rolls thin without tearing.*

Everyday Loaf

BREADS

1 standard loaf · 64% hydration · Mix 20 min · Rise 2 hrs · Bake 30–35 min ·
Oven 375°F (190°C)

A versatile, easily handled white loaf built on a baker's formula — 64% hydration, the dough that does everything. Soft enough for sandwiches, sturdy enough to shape free-form. The percentages are by weight of flour, so you can scale it up or down and it stays true.

FORMULA · 1 LOAF

Flour (AP or bread)	375 g · 100%
Water (warm)	240 g · 64%
Butter or Oil	14 g · 3.7%
Sugar (or Honey)	12 g · 3.2%
Salt	9 g · 2.4%
Active Dry Yeast	7 g · 1.9%

Total Dough Mass **657 g · 175.2%**

Hydration = water ÷ flour × 100 = 64%. Aim for a final dough temp (DDT) of **76–78°F (24–26°C)** — adjust water temp to hit it.

METHOD

- 1. Bloom the yeast.** Stir the yeast (7 g) and sugar (12 g) into the warm water (240 g). Rest 5–10 min until foamy.
- 2. Mix.** Combine the flour (375 g) and salt (9 g). Add the yeast water and the butter or oil (14 g). Mix to a rough, shaggy dough.
- 3. Knead.** Knead 10 min by hand (or 6–7 min in a stand mixer on medium) until smooth and elastic. The dough should pass a windowpane test — stretch thin without tearing.
- 4. Bulk rise.** Cover and ferment ~1 hr at warm room temperature, until doubled.
- 5. Shape.** Gently degas, shape into a tight loaf, and place seam-side down in a greased 9×5 in pan (or shape free-form on a tray).
- 6. Proof.** Cover and proof 45–60 min, until the dough crowns ~1 in above the rim and springs back slowly

when poked.

7. **Bake.** Bake at 375°F (190°C) for 30–35 min, until deep golden and the internal temperature reads **200–205°F (93–96°C)**.
8. **Cool.** Turn out and cool on a rack at least 1 hr before slicing — cutting hot bread gums the crumb.

Yahya's note: *the loaf is done when the thermometer says so, not when the timer rings. 64% hydration is forgiving — wetter for a more open crumb, drier for tidy sandwich slices, but weigh it either way.*
